Just some info about panels

If you're using a package that has it's own panel and/or naviagtion buttons (as `pdfscreen`) don't even consider using the preliminary support for this in **T$_E$XPower**.

Using it for `seminar` / `powersem` as we are doing here is OK . . .

Things to remember:

- If you want to declare your own panels, you have to call `\backgroundstyle` after the panel declaration.

- The font color used in the panels are controlled by ⟨pos⟩`paneltextcolor`.
