|----------|-----------------------|----------|
| 1 | Introduction | 1 |
| 2 | Implementation | 1 |

1 Introduction

The user documentation is found in `manual.tex` and the FAQ. Only the implementation documentation is covered in this document.

Make seminar ready for the Third Millennium ;-) This class loads seminar and tries to fix some problems which occur when trying to create dynamic presentations with the `texpower` package.

Some new features helpful for dynamic presentations are also added.

This class is part of the TeXPower bundle, to be found at

<http://texpower.sourceforge.net/>

The TeXPower bundle also contains a package `fixseminar.sty` which applies some more fixes, in particular for `hyperref`. These can not be applied here because they have to be made after `hyperref` is loaded.

2 Implementation

1 `\RequirePackage{ifthen}`

The display option is understood by all relevant classes and packages from the TeXPower bundle. It means that ‘dynamic’ features are to be turned on. There is a boolean register `display` (as defined in `ifthen.sty`) which is set by this option and can be used to differentiate between slides for display and slides for printout. Notes are disabled automatically.

2 `\newboolean{display}`

*This document corresponds to `powersem v0.8a`, dated 2004/07/27.

```
3 \DeclareOption{display}
4 {\setboolean{display}{true}\PassOptionsToClass{slidesonly}{seminar}}
```

The truepagenumbers option makes powersem count pages with the counter page, independently of the counter slide. This enables proper working of TeX-Powers navigation buttons (some of which calculate relative page numbers) even when the counter slide is reset frequently (for slide numberings of the type <1>. <n>. <m>).

```
5 \newboolean{truepn@PS}
6 \DeclareOption{truepagenumbers}{\setboolean{truepn@PS}{true}}
```

The KOMA option tells powersem to load scrartcl (from the KOMA suite of document classes) instead of article.

```
7 \newboolean{BaseClass@PS}
8 \DeclareOption{KOMA}
9 {\setboolean{BaseClass@PS}{true}\providecommand{\baseclass}{scrartcl}}
```

The UseBaseClass option is more neutral: It tells powersem to load the class \baseclass (initially article) instead of article.

```
10 \DeclareOption{UseBaseClass}
11 {\setboolean{BaseClass@PS}{true}\providecommand{\baseclass}{article}}
```

The reportclass option tells powersem to load the class \baseclass (initially report) instead of article.

```
12 \DeclareOption{reportclass}
13 {\setboolean{BaseClass@PS}{true}\providecommand{\baseclass}{report}}
```

The bookclass option tells powersem to load the class \baseclass (initially report) instead of article.

```
14 \DeclareOption{bookclass}
15 {\setboolean{BaseClass@PS}{true}\providecommand{\baseclass}{book}}
```

We need to redefine the a4paper option which is broken in seminar.cls

```
16 \DeclareOption{a4paper}{\PassOptionsToClass{a4}{seminar}}
```

The calcdimensions option tells powersem to automatically calculate slidewidth and slideheight from paper dimensions and margins.

```
17 \newboolean{calcdim@PS}
18 \DeclareOption{calcdimensions}{\setboolean{calcdim@PS}{true}}
19 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{seminar}}
20
21 \ProcessOptions
```

Now we need to hack a little to make seminar load \baseclass instead of article (if one of the respectice options was given).

```
22 \let\oldLC@PS=\LoadClass
23
24 \ifthenelse{\boolean{BaseClass@PS}}
25 {%
26   \def\article@PS{article}
Make \PassOptionsToClass and \LoadClass use \baseclass...
27   \let\oldPOTC@PS=\PassOptionsToClass
28   \def\PassOptionsToClass#1#2%
```

```

29  {\edef\cls@PS{#2}%
30  \ifx\article@PS\cls@PS\oldPOTC@PS{#1}{\baseclass}%
31  \else\oldPOTC@PS{#1}{#2}%
32  \fi}
Furthermore, seminar redefines \paperheight and \paperwidth, saving their
value in \sem@paperheight and \sem@paperwidth. We undo this so the paper
dimension calculation of typearea can be used.
33  \renewcommand{\LoadClass}[2][]{%
34  {%
35  \edef\cls@PS{#2}%
36  \ifx\article@PS\cls@PS
37  \let\paperheight\sem@paperheight\let\paperwidth\sem@paperwidth
38  \oldLC@PS{#1}{\baseclass}%
39  \ifarticle\else\portraittrue\fi
40  \else
41  \oldLC@PS{#1}{#2}%
42  \fi
43  }%
44 }%
45 {}}

```

Finally, the seminar class and some bug fixes are loaded.

```

46 \oldLC@PS{seminar}
47
48 \AtBeginDocument
49 {%
50 \input{seminar.bug}%
51 \input{seminar.bg2}%
52 }%

Change History

| | | |
|------|------------------|---|
| v0.1 | seminar. | 1 |
|------|------------------|---|

General: First version. So far it
doesn't do much more than load

v0.2

General: Force seminar to

| | | |
|--|---|--|
| treat <code>\paperwidth</code> and <code>\paperheight</code> in a sensible manner. | 1 | |
| v0.3 | | |
| General: Added option ‘ <code>calcdimensions</code> ’. | 1 | |
| v0.4 | | |
| General: Now separates text from footnotes when option ‘ <code>display</code> ’ is given. | 1 | |
| v0.5 | | |
| General: <code>\@colht</code> is ignored by seminar, which is bad. Added a patch to <code>\set@slidesize</code> . <code>calcdimensions</code> now handles slide frames. | 1 | |
| v0.5a | | |
| General: The footnote patch with option <code>display</code> effectively disabled setting <code>\centerslide=true</code> . Fixed. | 1 | |
| v0.6 | | |
| General: seminar’s <code>\output@slide</code> kernel copied (from <code>seminar.bg2</code>) and modified for better color handling and to remove | | |
| | | some overfull <code>\vbox</code> warnings. There was another underfull <code>vbox</code> warning lurking in the footnote patch. Removed. New option <code>truepagenumbers</code> for co-operation with <code>texpower</code> in case ‘fragmented’ slide numbers (like 3.5.1) are used. Make seminar’s form of raggedright lines (controlled by <code>\raggedslides</code>) active in parboxes and minipages (and p columns in tables or arrays). |
| v0.7 | | |
| General: Inserted <code>\nointerlineskip</code> in page building code to heal a slight problem with vertical spacing. A small modification was necessary wrt the KOMA option because with <code>fixseminar v0.0.4</code> , <code>pdflatex</code> slides can now be rotated. | 1 | |
| v0.8a | | |
| General: Moved to dtx format. No other code changes. | 1 | |

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
