

## Just some info about panels

If you're using a package that has it's own panel and/or navigation buttons (as `pdfscreen`) don't even consider using the preliminary support for this in **T<sub>E</sub>XPower**.

Using it for `seminar / powersem` as we are doing here is OK ...

Things to remember:

- If you want to declare your own panels, you have to call `\backgroundstyle` after the panel declaration.
- The font color used in the panels are controlled by `\langle pos \rangle paneltextcolor`.
